Printed in the United States of America.

The information in this manual has been checked carefully and is believed to be accurate; however, Opto 22 assumes no responsibility for possible inaccuracies or omissions. Specifications are subject to change without notice.

Opto 22 warrants all of its products to be free from defects in material or workmanship for 30 months from the manufacturing date code. This warranty is limited to the original cost of the unit only and does not cover installation, labor, or any other contingent costs. Opto 22 I/O modules and solid-state relays with date codes of 1/96 or newer are guaranteed for life. This lifetime warranty excludes reed relay modules, *groov* and SNAP serial communication modules, SNAP PID modules, and modules that contain mechanical contacts or switches. Opto 22 does not warrant any product, components, or parts not manufactured by Opto 22; for these items, the warranty from the original manufacturer applies. Refer to Opto 22 form 1042 for complete warranty information.

1: Welcome

INTRODUCTION

Now you can safely and reliably sense and switch 5–60 VDC, 120 VAC, and 240 VAC loads with a Raspberry Pi®. Your Pi can switch industrial-level electrical loads far beyond the Pi's built in 3.3 VDC GPIO pins, so you can monitor and control electrical loads required for real-world devices like industrial motors, pumps, and sensors.

This Digital I/O System for Raspberry Pi is ideal for prototyping, proofs of concept, and environments in which an industrially hardened controller isn't required.

Digital I/O System for Raspberry Pi—This example shows a Pi, the Digital I/O Carrier Board, a PBSC industrial power supply, a G4 mounting rack, and 16 G4 digital I/O modules. All items are sold separately; build your system based on your application's requirements.

Digital I/O System for Raspberry Pi—This example shows a Pi, the Digital I/O Carrier Board, and a SNAP mounting rack with four 4-point SNAP digital I/O modules, totalling 16 I/O points. All items are sold separately.

What You Need

- **Raspberry Pi**—Any model with a 40-pin GPIO header connector
- **Digital I/O Carrier Board for Raspberry Pi**—Provides a GPIO interface to connect your Pi to the digital I/O mounting rack.
- **I/O mounting rack**—Holds I/O modules.
- **Digital I/O modules**—Wired directly to field sensors and actuators, these input and output (I/O) modules from automation manufacturer Opto 22 have a long track record of reliable service worldwide.
- **Power supply**—The Pi can be powered from the rack or the rack from the Pi. An industrial quality rack power supply is recommended.

DIGITAL I/O CARRIER BOARD FOR RASPBERRY PI

Opto 22's Digital I/O Carrier Board for Raspberry Pi (part number [OPTO-P1-40P](#)) is the key part in the system. It connects your Pi to the digital I/O rack. The Carrier Board includes an interface cable and Pi board mounting standoffs.

Insert the Carrier Board's cable into your Pi's 40-pin GPIO connector, and snap the board onto a compatible Opto 22 I/O rack.

An auxiliary 40-pin connector on the Carrier Board supports HAT add-on boards using UART, SPI, or I2C.

Use your favorite Pi-supported programming language to read and write to up to 16 digital I/O points on the rack. Code samples and more programming information are available on developer.opto22.com.

The industrially hardened Carrier Board withstands temperatures of -20 to 70 °C (operating) or -40 to 85 °C (in storage) and relative humidity of 95% (non-condensing). It is CE approved and carries a warranty of 30 months from the date of manufacture.

See the [Digital I/O Carrier Board for Raspberry Pi](#) on our website.

Digital I/O Carrier Board for Raspberry Pi

CHOOSE YOUR I/O FAMILY

Once you have your Pi and your Carrier Board, just choose the I/O family most suited to your needs: G4 or SNAP.

NOTE: If you prefer to use Quad Pak or G1 I/O digital modules, the CarrierBoard also supports the following racks: PB16HQ, PB4H, PB8H, and PB16H.

G4 I/O

G4 modules were first introduced in 1989 and are still manufactured today. G4 I/O modules have only 1 point per module for maximum flexibility. Most output modules are individually fused and include an LED to indicate status. Each output module can switch up to 3 A.

To choose your G4 rack and I/O, see [Chapter 2: G4 Digital I/O](#).

SNAP I/O

SNAP I/O takes up less space with four points per module and costs less per point. Four LEDs are visible on the top of the module to indicate status for each of the four points. Most output modules can switch up to 0.75 A per point or a total of 3 A per module. If you need a higher current rating, SNAP-OMR6 modules can switch up to 6 A per point.

To choose your SNAP rack and I/O, see [Chapter 3: SNAP Digital I/O](#).

WHAT'S IN THIS BOOK

This *Digital I/O for Raspberry Pi Selection Guide* pulls together information on the digital I/O products you can use with your Raspberry Pi:

Chapter 2: G4 Digital I/O—Choose your G4 mounting rack and I/O. Includes detailed drawings, specifications, and wiring diagrams.

Chapter 3: SNAP Digital I/O—Choose your SNAP I/O and see drawings, specifications, and wiring diagrams.

Chapter 4: Digital I/O Accessories—Find power supplies, fuses, and jumper straps for G4 and SNAP.

Chapter 5: Reading and Writing—Includes pin mapping diagrams.

FOR HELP

If you have any questions about these digital I/O products for Raspberry Pi and cannot find the answers you need in this book or on our website, please contact Opto 22 Product Support. Technical support for all Opto 22 products is free.

Phone: 800-TEK-OPTO (800-835-6786 toll-free
in the U.S. and Canada)
951-695-3080
Monday through Friday,
7 a.m. to 5 p.m. Pacific Time

*NOTE: Email messages and phone calls
to Opto 22 Product Support are
grouped together and answered in the
order received.*

Fax: 951-695-3017

Email: support@opto22.com

Opto 22 website: www.opto22.com

When calling for technical support, be prepared to provide a complete description of your hardware and operating system to the Product Support engineer. This information should include:

- Accessories installed
- Type of power supply
- Types of I/O modules and racks used
- Third-party devices installed
- Wiring for your system

2: G4 Digital I/O

G4 WITH THE RASPBERRY PI AND DIGITAL I/O CARRIER BOARD

Your G4 system—complete with the Pi, Carrier Board, G4 mounting rack and 8 G4 I/O modules—looks something like this:

See the following pages for details on parts of the G4 system:

- [Choose a G4 Mounting Rack](#) page 6
- [Choose your G4 I/O Modules](#) page 10
- [Power supplies and other accessories](#) page 47

CHOOSE A G4 MOUNTING RACK

G4 digital I/O mounting racks hold 8 or 16 single-point I/O modules and include these features:

- Modules are securely attached with a threaded captive hold-down screw. Modules can be inserted and removed easily and quickly without disturbing field wiring.
- Spare fuse included for G4 output modules
- Barrier strips with screw terminals provide the field and mounting rack power connections.
- Uses a single 5 VDC power supply for control power (see [“Power Supplies” on page 47](#))
- Operating temperature: 0° to 70° C; 95% relative humidity, non-condensing
- UL recognized, CSA certified, and CE compliant

A Note on Fuses

These G4 racks come equipped with a 1A fuse, which is sufficient for the Raspberry Pi, rack, and I/O modules. However, it is not sufficient if you are using USB peripherals such as USB-WiFi dongles, displays, and hard drives.

If you are using USB peripherals, you should replace the 1 A fuse in the rack with a 5 A fuse. For your convenience a compatible 5 A fuse is shipped with the OPTO-P1-40P Carrier Board.

Also be sure to see [“Power Supplies for G4” on page 47](#) and [“G4 Fuses” on page 49](#).

Choose Your Rack

Choose a rack from the following table, and then see the referenced page in this chapter for detailed drawings and specifications. The link on the part number takes you to the product on our website.

Model	Number of Channels	Input Modules	Output Modules	AC	DC	Built-in Fuse Tester	Field Connector	Control Connector	Special Features	See
G4PB8H	8	●	●	●	●	●	screw-type barrier strip	50-pin header connector	Works with Opto 22 PBSC power supply. Power indicator light.	page 7
G4PB16H	16	●	●	●	●	●	screw-type barrier strip	50-pin header connector	Works with Opto 22 PBSC power supply. Power indicator light.	page 8

G4PB8H Mounting Rack

Description

The G4PB8H I/O mounting rack accommodates up to eight G4 I/O modules.

The logic supply is fused with a 1A fuse. See “A Note on Fuses” on page 6.

Specifications

Operating temperature	0° to 70° C
Interface connectors	
Field:	Screw-type barrier strip accommodates up to 10 AWG wire
Control:	50-pin header connector
Power:	Two-position screw terminal or Opto 22 PBSC power supply

Dimensions—G4PB8H

CHOOSE A G4 MOUNTING RACK

Connections—G4PB8H

Notes:

1. Even pins on control connector are connected by etch to common.
2. +VCC and return connected to terminals marked +5V and GND.
3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.
4. Use only 5 VDC logic modules when using the mounting rack with a Raspberry Pi.

Module Position	Control (Header Connector)	Field (Terminal Strip)
0	47	1 and 2
1	45	3 and 4
2	43	5 and 6
3	41	7 and 8
4	39	9 and 10
5	37	11 and 12
6	35	13 and 14
7	33	15 and 16

G4PB16H Mounting Rack

Description

The G4PB16H I/O mounting rack accommodates up to 16 G4 I/O modules.

The logic supply is fused with a 1A fuse. See “A Note on Fuses” on page 6.

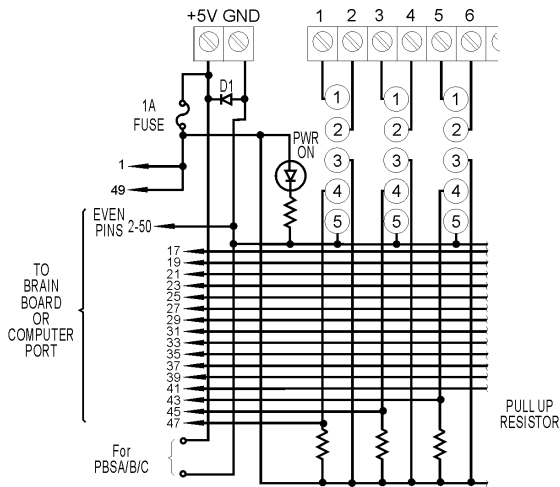

Specifications

Operating temperature	0° to 70° C
Interface connectors	Screw-type barrier strip accommodates up to 10 AWG wire
Field:	50-pin header connector
Control:	Two-position screw terminal for Opto 22 PBSC power supply
Power:	

Dimensions—G4PB16H

Connections—G4PB16H

Notes:

1. Even pins on control connector are connected by etch to common.
2. +VCC and return connected to terminals marked +5V and GND.
3. At each module position on the field terminal strip, the lower number is always connected to pin 1 of the I/O module.
4. Use only 5 VDC logic modules when using the mounting rack with a Raspberry Pi.

Module Position	Control (Header Connector)	Field (Terminal Strip)
0	47	1 and 2
1	45	3 and 4
2	43	5 and 6
3	41	7 and 8
4	39	9 and 10
5	37	11 and 12
6	35	13 and 14
7	33	15 and 16
8	31	17 and 18
9	29	19 and 20
10	27	21 and 22
11	25	23 and 24
12	23	25 and 26
13	21	27 and 28
14	19	29 and 30
15	17	31 and 32

CHOOSE YOUR G4 I/O MODULES

Once you have your rack, you're ready to choose input and output modules.

- *Input* modules monitor things; they bring status information into your Raspberry Pi.
- *Output* modules control things; based on logic in your Pi, they turn things on or off.

Features

The following features apply to all G4 I/O modules:

- Maximum flexibility with one point per module
- UL recognized, CSA certified, and CE compliant
- Passed NEMA Showering Arc Test (ICS 2-230)
- Meet IEEE Surge Withstand Specification (IEEE-472)
- Operating temperature: - 30° to 70° C.

Choose Your Module

Choose a module from the following table, then see the referenced page for detailed drawings and specifications. The link on the module part number takes you to the product on our website.

Input	Output	AC	DC	Field Voltage	Special Features	Module	See
●		● ¹	●	10–32 VDC 12–32 VAC		G4IDC5	page 11

¹ These DC input modules work with either DC or AC field voltages.

² These AC input modules work with either AC or DC field voltages.

G4 Digital DC Input Modules

Description

Opto 22's G4 DC input modules are used to detect on/off DC voltage levels. Typical applications for DC input modules include sensing the presence or absence of voltage with devices such as proximity switches, limit switches, selector switches, push buttons, photoelectric switches, and TTL-compatible devices.

All modules include a built-in LED status indicator.

All DC input modules except the G4IDC5K and the G4IDC5D are designed with filtering on the input and a hysteresis amplifier, providing high noise rejection and transient-free, "clean" switching.

Special features:

- The low-cost G4IDC5D is used for data acquisition.
- The G4IDC5MA features a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Specifications—DC Input Modules

	Units	G4IDC5	G4IDC5D	G4IDC5G

Schematics—DC Input Modules

To wire sensors to G4 inputs, see [“G4 I/O Field Wiring”](#) on page 22.

G4 Digital AC Input Modules

Description

Opto 22's G4 AC input modules are used to detect on/off AC voltage levels. Typical applications for AC input modules include sensing the presence or absence of voltage with devices such as proximity switches, limit switches, float switches, selector switches, push buttons, toggle switches, and thermostats.

All modules include a built-in LED status indicator.

All AC input modules are designed with filtering on the input and a hysteresis amplifier, providing high noise rejection and transient-free "clean" switching.

The G4IAC5MA module features a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Specifications—AC Input Modules

* Compatible with Raspberry Pi

Dimensions—AC Input Modules

Schematics—AC Input Modules

To wire sensors to G4 inputs, see "G4 I/O Field Wiring" on page 22.

G4 Digital Input Test Module

Description

Opto 22's G4SWIN input test module is used to simulate an input on an I/O mounting rack. This module is ideal for simulating discrete external events when testing application software.

Each module contains a toggle switch that closes a contact on the logic side. An internal resistor limits the current through the switch and provides a load similar to that of an actual input module. An internal debounce circuit allows rapid switch closures without false counts.

The G4SWIN has no internal connection between logic and field inputs. A built-in LED indicates the simulated on/off status.

Specifications—Digital Input Test Module

Isolation, input-to-output (transient): 1 ms 1 minute	4000 volts 1500 volts
Temperature: Operating Storage	-30 to +70 °C -30 to +85 °C

Dimensions and Schematics—Digital Input Test Module

G4 Digital DC Output Modules

Description

Opto 22's G4 DC output modules are used to control or switch DC loads. Typical applications for DC output modules include switching loads such as DC relays, solenoids, motor starters, lamps, and indicators.

All modules include a built-in LED status indicator.

The G4ODC5MA module features a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Specifications—DC Output Modules

	Units	G4ODC5	G4ODC5A	G4ODC5MA

* Commutation diode must be used on inductive loads. Typically, use diode IN4005.
 ** Control line is compatible with totem pole or tri-state output device.

To wire devices to G4 outputs, see “G4 I/O Field Wiring” on page 22.

G4 Digital AC Output Modules

Description

Opto 22's G4 AC output modules are used to control or switch AC loads. Typical applications for AC output modules include switching loads such as AC relays, solenoids, motor starters, heaters, lamps, and indicators.

Each module features zero voltage turn-on and zero current turn-off. All AC output modules are equivalent to single-pole, single-throw, normally open contacts (Form A, SPST-NO) except the G4OAC5A5, which is equivalent to a single-pole, single-throw, normally closed contact (Form B, SPST-NC).

All digital AC output modules include a built-in LED status indicator.

The G4OAC5MA and G4OAC5AMA modules each feature a manual-on/manual-off/automatic switch, ideal for diagnostic testing of control applications.

Specifications—AC Output Modules

	Units	G4OAC5	G4OAC5A	G4OAC5A5	G4OAC5MA	G4OAC5AMA

To wire devices to G4 outputs, see "G4 I/O Field Wiring" on page 22.

G4 Digital Output Test Module

Description

Opto 22's G4SWOUT output test module is used to simulate a G4 output on an I/O mounting rack. It is ideal for testing field wiring and devices by simulating an output from the computer.

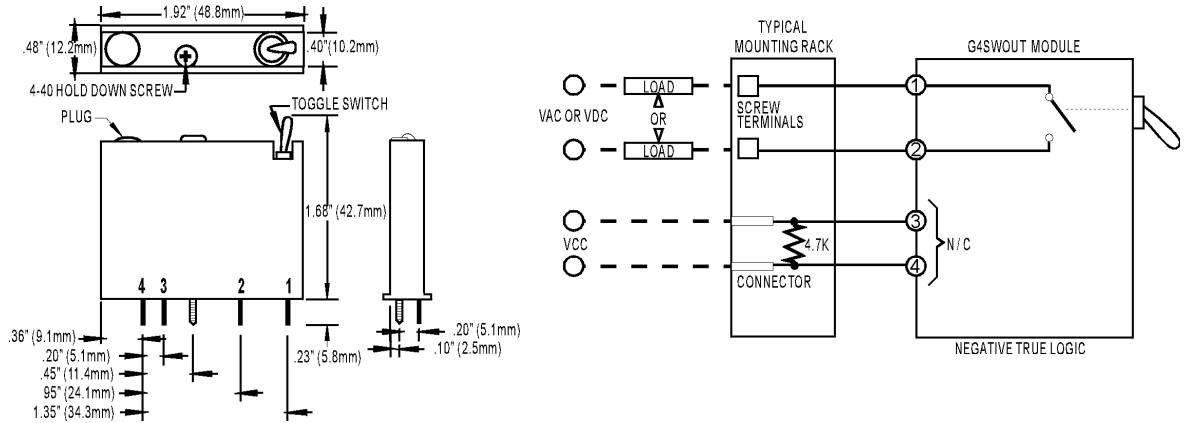

Each module contains a manual toggle switch on the field side. The switch closes a contact that shorts the field terminals to turn on a field output.

The switch handles 3 amps at 250 VAC/VDC. Internally, there is no connection between the field and logic sides of the module.

Specifications—Output Test Module

Output voltage range	250 VAC/VDC
Isolation, input-to-output (transient)	4000 volts
Temperature:	
Operating	-30 to +70 °C
Storage	-30 to +85 °C

Dimensions and Schematics—Output Test Module

G4 I/O FIELD WIRING

The diagrams in this chapter show you how to wire G4 I/O modules to your sensors and actuators.

Input Modules Using DC Field Voltages

Use this diagram for the following modules:

G4IDC5	G4IDC5G	G4IAC5
G4IDC5B	G4IDC5K	G4IAC5A
G4IDC5D	G4IDC5MA	G4IC5MA

NOTE: The AC input modules listed above will work with either AC or DC field voltages. If you are using them with AC voltages, see "Input Modules Using AC Field Voltages," below. If you are using them with DC field voltages, follow this diagram:

Input Modules Using AC Field Voltages

Use this diagram for the following modules:

G4IAC5	G4IDC5
G4IAC5A	G4IDC5G
G4IAC5MA	G4ID5MA

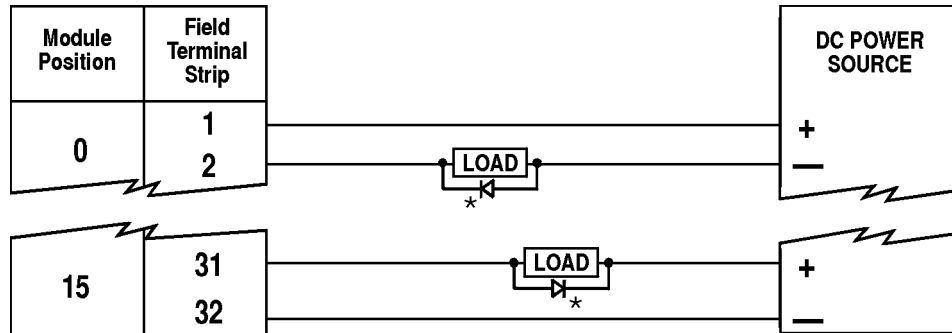

NOTE: The DC input modules listed at left will work with either DC or AC field voltages. For DC voltages, see "Input Modules Using DC Field Voltages," above. For AC voltages, use this diagram:

Output Modules Using DC Field Voltages

Use this diagram for G4IAC5 modules you are using with DC voltages, and for the following modules:

- G4ODC5
- G4ODC5A
- G4ODC5MA

*Note: Commutation diode must be used on inductive loads. Typically, use diode 1N4005

Output Modules Using AC Field Voltages

Use the diagram on this page for the following modules:

- G4OAC5
- G4OAC5A
- G4OAC5A5
- G4OAC5MA
- G4OAC5AMA

NOTE: The load can go on either terminal because AC modules are non-polar.

3: SNAP Digital I/O

SNAP WITH THE RASPBERRY PI AND DIGITAL I/O CARRIER BOARD

Your SNAP system—complete with the Pi, Carrier Board, SNAP mounting rack and 4 G4 I/O modules (a total of 16 I/O points)—looks something like this:

See the following pages for details on parts of the SNAP system:

[SNAP Mounting Rack](#) page 26

[Choose your SNAP I/O modules](#) page 27

[Power supplies and other accessories](#) page 47

SNAP MOUNTING RACK

You use the [SNAP-D4M](#) rack with the Digital I/O Carrier Board. This rack holds 4 SNAP I/O modules, each containing 4 points, for a total of 16 points on the rack.

Field devices are wired directly to the top-mounted removable connectors on the SNAP I/O modules. .

Use the two 4-40 by 1/2-inch standard machine screws provided with each module to secure the module in position.

The SNAP rack can be panel mounted or DIN-rail mounted (with optional DIN rail clips). The rack uses a single 5 VDC power source.

The rack ships with a 1 A fuse. If you are using USB peripherals, replace it with a 4 A fuse. One is included with the OPTO-P1-40P Carrier Board for convenience.

Specifications

Length	4.19 in. (106.43 mm)
Center to center length	1.98 in. (50.29 mm)
Number of center positions	2
Power Requirements	5 VDC ± 0.25 VDC @ 200 mA max.
Operating Temperature Range	0° to 70°C
Relative Humidity	95%, non-condensing
Warranty	30 months from date of manufacture

CHOOSE YOUR SNAP I/O MODULES

Next, choose the input and output modules you need.

- *Input* modules monitor things; they bring status information into your Raspberry Pi.
- *Output* modules control things; based on logic in your Pi, they turn things on or off.

Features

The following features apply to all SNAP digital I/O modules:

- Four channels per module
- Convenient pluggable wiring terminals
- Channel-specific LEDs
- UL and CE approved (some modules carry additional approvals)
- Accept 22 to 14 AWG wire

Choose Your Module

Choose a module from the following table, then see the referenced page for detailed drawings and specifications. The link on the module part number takes you to the product on our website.

SNAP Digital Input Modules

Opto 22's SNAP input modules are used to sense on or off status for AC or DC voltages from such sources as proximity switches, push buttons, or auxiliary contacts.

Most SNAP digital input modules can handle either AC or DC input voltage. Check module specs below to be sure.

Special features:

- The SNAP-IDC5G is ideal for detecting 48 VDC in telecom applications.
- The SNAP-IDC5-HT is designed for sensors that have a high leakage current.
- SNAP-IAC5MA and SNAP-IDC5MA feature manual-on/manual-off/automatic switches, ideal for testing control applications. The switches override input from field devices, so you can determine whether a problem lies in the application or in the device.

For wiring diagrams, see [page 38](#). For dimensional drawings, see [page 41](#).

SNAP Digital Output Modules

Opto 22 SNAP digital output modules are used to switch up to four separate AC or DC loads.

Features:

- Convenient pluggable wiring terminals accept 22 to 14 AWG wire
- Channel-specific LEDs
- DC outputs available in either a source or sink configuration
- AC outputs feature zero-voltage turn on and zero-current turn off to minimize transient switching.
- Fused output modules use a standard fuse with a convenient handle for easy replacement.

Modules with special features:

- SNAP-OAC5-i, SNAP-ODC5-i, and SNAP-ODC5A-i modules provide four isolated output channels.
- SNAP-OAC5MA and SNAP-ODC5MA include manual-on/manual-off/automatic switches, ideal for diagnostic testing of control applications. The switches override output from the application, so you can quickly check field device wiring. These modules each contain four isolated channels.

For wiring diagrams, see [page 38](#). For dimensional drawings, see [page 41](#).

SNAP Mechanical Power Relay Output Modules

SNAP mechanical power relay output modules offer four isolated channels for switching loads of up to 6 amps at 250 VAC or 30 VDC.

Each contact can carry 6 amps, and having more than one channel on at the same time does not reduce the amount of power each channel can carry.

Because these are form C modules, each of the four mechanical contacts can be wired as normally open or normally closed. Fusing is not provided; you must provide fusing when wiring the module.

See wiring diagrams on [page 40](#) and dimensional drawings on [page 44](#).

Specifications: SNAP Mechanical Power Relay Output Modules

	SNAP-OMR6-C	SNAP-OMR6T-C
Field Side Ratings (each channel)		
Contact Configuration	Form C (SPDT, normally open or closed)	Form C (SPDT, normally open or closed)
Line Voltage - Range	0–250 VAC or 5–30 VDC	0–250 VAC or 5–30 VDC
Current Rating	6 amps switching @ 250 VAC / 30 VDC	6 amps switching @ 250 VAC / 30 VDC
Surge Current	6 amps	6 amps
Minimum Load	5 VDC, 10 mA	5 VDC, 10 mA
Contact Resistance	≤ 100 milliohms	≤ 100 milliohms
Leakage Current	none	< 1 microamp @ 250 VAC
Clamping Voltage (for transient suppression)	External transient suppression required	440 V nominal
Duty Cycle	-- Not applicable --	1 Hz
Switching Power	1500 VA / 144 W (DC)	1500 VA / 144 W (DC)
Peak Blocking Voltage	250 VAC @ 360 V _{pk}	250 VAC @ 360 V _{pk}

4: Digital I/O Accessories

OVERVIEW OF ACCESSORIES

Accessories for Digital I/O for Raspberry Pi include the following:

- Power Supplies—see below.
- Fuses—see [page 47](#).
- Jumper straps—see [page 50](#).

POWER SUPPLIES

You can power the rack from the Pi or power the Pi from the rack. We recommend powering the Pi from the rack, to ensure sufficient, consistent, and reliable power to all devices connected to the Pi. Choose your power supply based on your system: G4 below, or SNAP on [page 48](#).

Power Supplies for G4

For G4 systems, the following industrial power supplies are available to power the Pi, rack, and I/O modules.

Input voltage	Output Current	Part number	Comments
12/24 VDC	1.5 A	PBSC	Screws to threaded contacts on the mounting rack; fits conveniently underneath the Carrier Board

USB peripherals: If you are using USB-powered peripherals attached to the Pi (like hard drives, displays, or WiFi dongles) you require a larger power supply that puts out more current. We recommend a 5 V power supply rated 2.5 A to 5 A, connected to the rack power terminals.

If you are powering through the Pi, follow the Raspberry Pi Project's 2.5 A recommendation.

Note that if you're using peripherals, you'll also need to replace the mounting rack's 1 A fuse with a 5 A fuse (included with the Digital I/O Carrier Board). See ["Fuses" on page 49](#).

Power Supplies for SNAP

For a SNAP system for Raspberry Pi, you'll need a 5 V power supply connected to the SNAP-D4M rack's power terminals. To determine the size supply you need, fill out the following worksheet.

For help on your Pi's power requirements, see the [Pi FAQ](#).

Item	Quantity	X Power Requirements (Amps)	Total Power Required (Amps)
Raspberry Pi (check your model's specs)	1		
USB peripherals (total)	---		
SNAP-D4M mounting rack	1	0.20	0.20
SNAP-IDC5-SW SNAP-IDC5-SW-NC		0.20	
SNAP-OMR6-C SNAP-OMR6T-C		0.16	
All other SNAP digital input or output modules		0.05	
Total current needed for system:			

Here's an example of how you'd use the worksheet. Suppose you have:

- Raspberry Pi 3 model B
- Peripherals plugged into the Pi's USB ports that require 1 A total current
- Two SNAP-IDC5-SW, one SNAP-OMR6-C, and one SNAP-OAC5-I on the rack

You'd complete the worksheet like this:

Item	Quantity	X Power Requirements (Amps)	Total Power Required (Amps)
Raspberry Pi (check your model's specs)	1	1.34	1.34
USB peripherals (total)	---	1.00	1.00
SNAP-D4M mounting rack	1	0.20	0.20
SNAP-IDC5-SW SNAP-IDC5-SW-NC	2	0.20	0.40
SNAP-OMR6-C SNAP-OMR6T-C	1	0.16	0.16
All other SNAP digital input or output modules	1	0.05	0.05
Total current needed for system:			3.15 A

IMPORTANT: The SNAP-D4M mounting rack ships with a 1 A fuse. If you're using peripherals, replace it with a 4 A fuse. One of these is included with the Digital I/O Carrier Board for convenience. Also see "Fuses" on page 49.

FUSES

Your Digital I/O System for Raspberry Pi includes a fuse on the mounting rack and fuses on most G4 and SNAP output modules.

G4 Fuses

G4 mounting rack fuse—The G4PB8H and G4PB16H mounting racks come equipped with a 1A fuse, which is sufficient for the Raspberry Pi, rack, and I/O modules. However, if you're using USB-powered peripherals (especially USB-WiFi dongles, displays, and hard drives), the 1 A fuse is not sufficient.

If you are using USB peripherals, replace the 1 A fuse in the rack with a 5 A fuse. For your convenience a compatible 5 A fuse is shipped with the OPTO-P1-40P Carrier Board.

G4 output module fuse—A 4-amp fuse is mounted on the top of most modules. Each mounting rack ships with one spare module fuse. Additional fuses can be ordered from Opto 22 or directly from Wickmann.

G4 Fuse part numbers:

Description	Part Number
1 amp fuses for G4PB8H or G4PB16H mounting racks (10 pack)	FUSE01B
5 amp fuses for G4PB8H or G4PB16H mounting racks (10 pack)	FUSE05B
4 amp fuses for G4 output modules (10 pack) (Not used for G4SWOUT modules)	FUSEG4B

SNAP Fuses

SNAP mounting rack fuse—The SNAP-D4M comes equipped with a 1A fuse. If you're using USB peripherals with your Raspberry Pi, the 1 A fuse is not sufficient. Replace it with a 4A fuse. For convenience, a compatible 4 A fuse is shipped with the OPTO-P1-40P Carrier Board.

SNAP output module fuse—A 4 A fuse is located on the top of most modules, with a small handle to remove it. Replacement fuses can be ordered from Opto 22 or directly from Wickmann.

Description	Part Number
4 amp fuses for SNAP racks and output modules (25 pack)	SNAP-FUSE4AB

JUMPER STRAPS

Jumper straps are used to simplify wiring in applications that require a common connection between I/O module positions.

G4 Jumper Strap

The **G4STRAPB** (package of 10) can be used on both the G4PB8H and G4PB16H I/O mounting racks. Each jumper strap has an insulated coating and can be cut to size.

Dimensions:

SNAP Jumper Straps

For SNAP modules, choose the strap that fits your module. To connect jumper straps on multiple modules, use the SNAP Wirestrap.

SNAP-STRAPB works with 8-position field connectors on many SNAP I/O modules.

SNAP-STRAP-OMR works with 12-position gray field connectors on SNAP-OMR6 modules.

Description	Part Number
Pack of 10 jumper straps for digital SNAP I/O modules	SNAP-STRAPB
Jumper strap for SNAP-OMR6 modules	SNAP-STRAP-OMR
Pack of 10 jumper connectors for digital SNAP I/O modules	SNAP-WIRESTRAPB

JUMPER STRAPS

5: Reading and Writing

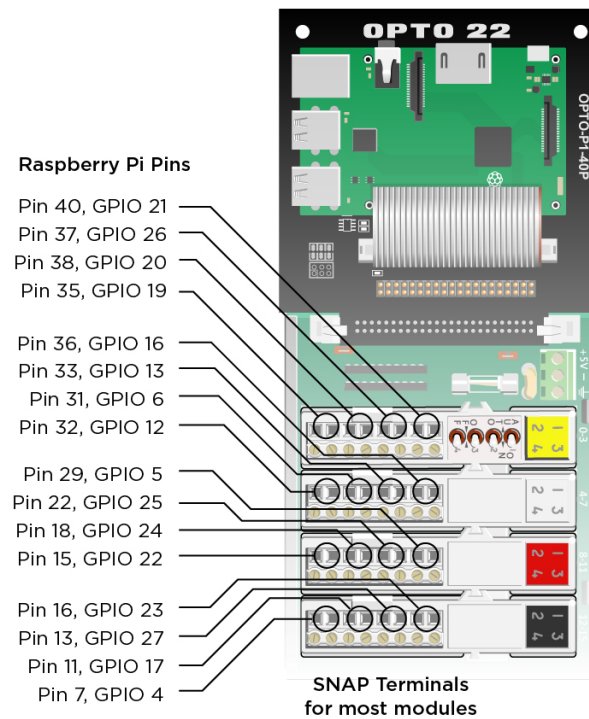

OVERVIEW

It's easy to read and write to Opto 22 I/O points using your favorite Pi-supported language—Python, Node-RED, Pi Terminal, Pi Filesystem GPIO, or many others.

Visit developer.opto22.com for code samples and tips for using your Pi to read and write to Opto 22 I/O modules.

IMPORTANT: Opto 22 I/O modules use negative true logic; that is, a zero bit means On and a 1 bit means Off. When reading and writing to I/O points, remember that 0 is On and 1 is Off.

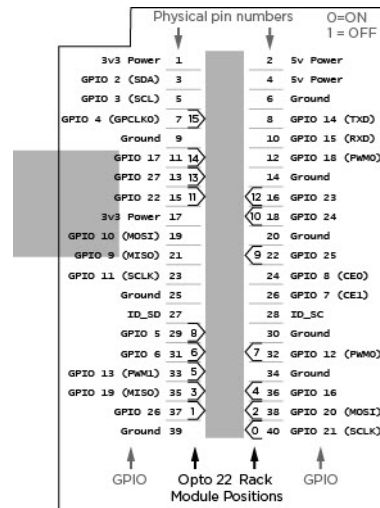

Mapping: GPIO Pins to SNAP I/O Modules

Mapping: GPIO Pins to G4 Modules

Mapping Overlay for Raspberry Pi

Place this overlay over your Pi's GPIO pins for a handy mapping reference. You can download the template from developer.opto22.com.
