Opto 22 welcomes new Central American distributor NV Technologies

Costa Rican distributor adds Opto 22's groov products to their portfolio of Industry 4.0 technologies

Temecula, CA - June 22, 2021 – Automation and industrial internet of things (IIoT) manufacturer Opto 22 welcomes NV Technologies as a new distributor of Opto 22 products in Central America and the Caribbean. As a certified provider of instrumentation, automation, and software tools, NV Tec's portfolio focuses on solutions that evolve operational processes to help operators achieve the benefits of Industry 4.0. More information can be found at <https://www.nvtecnologias.com/distribuidor-opto-22/>.

According to Esteban Núñez, general manager at NV Technologies, "Our work is about breaking the paradigm regarding the needs of Engineering, Maintenance, IT, and Quality teams, which has historically generated disagreement and halted innovation for our customers. NV Technologies seeks to unite these teams through technology and thus collaborate towards the digital transformation of manufacturing."

In operation since 2004, NV Tec is headquartered in Costa Rica and operates from Guatemala to Panama and in the Dominican Republic. They manage a portfolio of over 2000 products across 9 primary categories, which generate around \$1.5 million in revenue, including instrumentation, automation, HMI, connectivity, computers/servers, SCADA, MES, IIoT, and historians. NV Tec also offers design and support services for implementation, installation, commissioning, and deployment.

"NV Technologies broadens Opto 22's market presence in Central America," notes Selam Shimelash, Opto 22's Latin American sales manager, "but what makes them special is that they

understand the kinds of technologies required for modern applications and have built a competitive portfolio with like-minded technology partners.”

About Opto 22

Opto 22 designs and manufactures industrial control products and Internet of Things platforms that bridge the gap between information technology (IT) and operations technology (OT). Based on a core design philosophy of leveraging open, standards-based technology, Opto 22 products are deployed worldwide in industrial automation, process control, building automation, industrial refrigeration, remote monitoring, and data acquisition applications. Designed and manufactured in the U.S.A., Opto 22 products have a worldwide reputation for ease-of-use, innovation, quality, and reliability. For over 40 years OEMs, machine builders, automation end-users, and information technology and operations personnel have and continue to trust Opto 22 to deliver high-quality products with superior reliability. The company was founded in 1974 and is privately held in Temecula, California, U.S.A. Opto 22 products are available through a global network of distributors and system integrators.
